

Silver Shield® Makes Bathwraps the Better Choice

Anti-microbial Protection that Never Stops Protecting

If Bathwraps non-porous, virgin acrylic wasn't enough protection against the stain and odor problems caused by microbes, our systems now offer you the added exclusive protection of Silver Shield. Infused into the acrylic for the lifetime of your bath or shower system, the silver ions in Silver Shield attack microbe cells to prevent bacteria from growing and reproducing. Silver Shield means extra cleanliness for your bathroom.

Why Silver Shield is Safe and Effective

Don't confuse Silver Shield with other bath systems that may include a pesticide named Triclosan, which is currently under review by the Food and Drug Administration (FDA) for safety issues. Silver Shield employs silver ion technology, which has been cleared by the FDA for use in many products, meaning the FDA agrees it is a safe and effective technology. With Silver Shield infused into your Bathwraps tub, shower, or wall liner, its silver ions continually emit charges that can penetrate microorganisms. Once penetrated, these cells lose their ability to grow and reproduce. Ultimately, Bathwraps gives you double anti-microbial protection. Bathwraps' non-porous, virgin acrylic systems prevent microbes from penetrating the surface and the Silver Shield silver ion technology helps prevent microbial surface growth. Cleaner. Fresher. Healthier. More benefits with Bathwraps thanks to exclusive Silver Shield anti-microbial protection.

Bathwraps Exclusivity

Ours is the first and exclusive use of Silver Shield for the bath industry. Silver ion technology has already been protecting other surfaces for years. Our process was specifically designed for our industry with your health in mind. We employ the newest manufacturing methods to infuse the protection right into our materials. It's safe and effective and creates an even healthier environment for you and your family.

SUPERCHARGE your safety and protection with **Silver Shield®**.

Don't Be Fooled by the Competition

Silver Shield employs silver ion technology, a technology found in several FDA cleared products.

Cleaner. Fresher. Healthier.

More benefits thanks to exclusive Silver Shield anti-microbial protection.

We do not use harsh, toxic chemicals in our products, we only use the safest and environmentally friendly products on the market.

We stay ahead of the trends so your family stays safe and worry-free.

Silver Shield® Technology

Why Bathwraps is the Better Choice

SILVER SHIELD TECHNOLOGY	COMPETITOR TECHNOLOGY
Silver Ion Technology attacks microbe cells to prevent bacteria from growing and reproducing.	None, or may include Triclosan, a pesticide.
Safe and effective protection against stains, odors, mold and mildew.	Harmful and toxic to humans and environment and not a good choice for protection for your family.
Exclusive technology from industry manufacturer.	Technology used on various products not exclusive to industry.
Safe for people, pets and the environment.	Toxic chemicals harmful to people, pets and the environment.
FDA cleared for use in multiple products.	Triclosan is currently under FDA review in the United States.

Silver Shield's silver ion technology is similar to that found in many Food and Drug Administration (FDA) cleared products. Be aware of competing products that claim anti-microbial protection but may include a pesticide currently under investigation by the FDA for safety concerns.

Silver Shield®: the anti-microbial protection that never stops protecting.
